

Tim J. Schoonbeek

PHD · COMPUTER VISION · MULTIMODAL MACHINE LEARNING

✉ t.j.schoonbeek@gmail.com | 🏠 timschoonbeek.github.io/ | 🌐 timschoonbeek

Summary

Obtained PhD degree at ASML and TU/e. I build scalable computer vision systems in industrial settings, ranging from multimodal video models for procedure step recognition to safety-critical drowning detection for swimming pools. Proven track record translating AI research into real-world systems, as demonstrated through patents, publications in various research fields, and lives saved.

Deep learning: CV, 3D perception, ML, augmented reality, HCI, video understanding, transformers, VLMs, convnets, contrastive learning. Languages & tools: Python, PyTorch, NumPy, OpenCV, Unity, Pandas, AWS, Azure, Git, CI/CD, PyTest.

Experience

Ocuma

Eindhoven, Netherlands

APPLIED AI SCIENTIST

Jan 2026 - June 2026

- Led R&D for safety-critical AI, improving recall by 88.5% at a fixed false-positive rate within 6 months.
- Created a pipeline that evaluates millions of images to select the most informative based on disagreement and anomaly detection.
- Developed a novel and automated camera calibration method for swimming pools to obtain exact swimmer location and speed.

Microsoft Research

Redmond, USA

RESEARCH INTERN: INTERACTIVE MULTIMODAL AI SYSTEMS

June 2025 - Sept. 2025

- Developing real-time multimodal systems with LLM-powered perception to create benchmarks for physically situated intelligence.
- Building models of social cues (turn-taking, engagement, attention) from large datasets while collaborating with cross-disciplinary teams.

ASML Research

Eindhoven, the Netherlands

VISITING RESEARCHER: PHD ON ADVANCED AUGMENTED REALITY SOLUTIONS FOR AI-BASED SERVICITIZATION

Sept. 2021 - Nov. 2025

- PhD project on automatic extraction of relevant and meaningful information from procedural actions within an industrial setting.
- Filed patents, published peer-reviewed articles, and contributed to the ASML Technology Conference, the world's largest developer event.
- Built egocentric industrial dataset & evals (IndustReal); released tasks and metrics; benchmarked with several backbones (5k+ downloads).

Honda Research Institute Europe GmbH

Frankfurt, Germany

MASTER INTERNSHIP: INTERACTION-AWARE TRAJECTORY PREDICTION USING GRAPH NEURAL NETWORKS

Mar. 2020 - July 2020

- Researched spatio-temporal graph neural networks for trajectory prediction of surrounding vehicles in highway driving scenarios.

Automotive Technology InMotion (Student Team)

Helmond, the Netherlands

RACE ENGINEER - PART-TIME

Sept. 2018 - Sept. 2019

- Performed and optimized drive cycle simulations for an electric endurance racing car.

Education

Eindhoven University of Technology

Eindhoven, Netherlands

PHD ON ADVANCED AUGMENTED REALITY SOLUTIONS FOR AI-BASED SERVICITIZATION (ELECTRICAL ENGINEERING FACULTY)

Sept. 2021 - Nov. 2025

- Doctoral project funded by ASML on industrial procedure understanding using computer vision and machine learning algorithms.
- Focus on scalable, multimodal computer-vision systems for procedure understanding and creating relevant industrial benchmarks.

University of Cambridge

Cambridge, United Kingdom

VISITING RESEARCHER

Oct. 2024 - April 2025

- Conducted research on enhancing human-robot interaction, focusing on AI systems to assist industrial operators in procedure execution.
- Designed perception algorithms for error localization for a real-time deployment on AR glasses; conducted user studies.
- Reached the finals (top 2.5%) in the OxBridge AI Startup Challenge, a competition between students from Cambridge and Oxford.

International Summer School

Matera, Italy

EXTENDED REALITY AND ARTIFICIAL INTELLIGENCE

July 2023

- Pro-actively took up the role as a link between the programmers and designers in a multidisciplinary project, besides my technical roles.
- Won the *best project award* for our work on an XR app for engagement with cultural heritage.

Eindhoven University of Technology

Eindhoven, Netherlands

M.Sc. IN AUTOMOTIVE ENGINEERING (SPECIALIZATION: MOBILE PERCEPTION SYSTEMS)

Feb. 2019 - May 2021

- Earned the *cum laude* honours distinction for a 4.0 GPA (8.5/10).
- Master thesis "Learning to Predict Collision Risk from Simulated Optical Flow" awarded a 9.0/10.0. Conducted research on sim-to-real domain generalization by design, rather than through explicit domain adaptation techniques.
- Published paper, singled out among the top 5% of submissions for *oral presentation* at the 2022 IEEE Intelligent Vehicles Symposium.

Eindhoven University of Technology

Eindhoven, Netherlands

B.Sc. IN ELECTRICAL ENGINEERING (AUTOMOTIVE TRACK)

Sept. 2015 - Feb. 2019

- Bachelor thesis on depth estimation from disparity and segmented images awarded a 8.5/10.
